Media Subscription Analytics

orlindataanalyst.github.io/Projects/

Project Overview

- **Goal:** Analyze subscription growth, churn trends and revenue performance 2023-2024
- **KPIs:** Monthly Churn Rate (MRR), Active Subscriptions, Plan Tier Distribution
- **Tech Stack:** SQL Server, Power BI, DAX

Data Sources & Methodology

- **Integrated data (industry-standard)** - SaaS subscription-based dataset (source: kaggle.com)
- **Data preparation (SQL)** - cleaning, converting and filtering data, handling NULL dates, creating churn logic and revenue metrics
- **Data Modelling (Power BI)** - Star Schema Modelling, Date table, Relationships, DAX, Dashboard Overview

Media Subscription Analytics

KPIs

- Active Subscriptions
- Monthly Recurring Revenue (MRR)
- Monthly Churn Rate
- Churned Subscriptions

Business Metrics

- How fast is revenue growing?
- Are we retaining customers?
- Which subscription tiers perform best?
- Is churn stable or increasing?

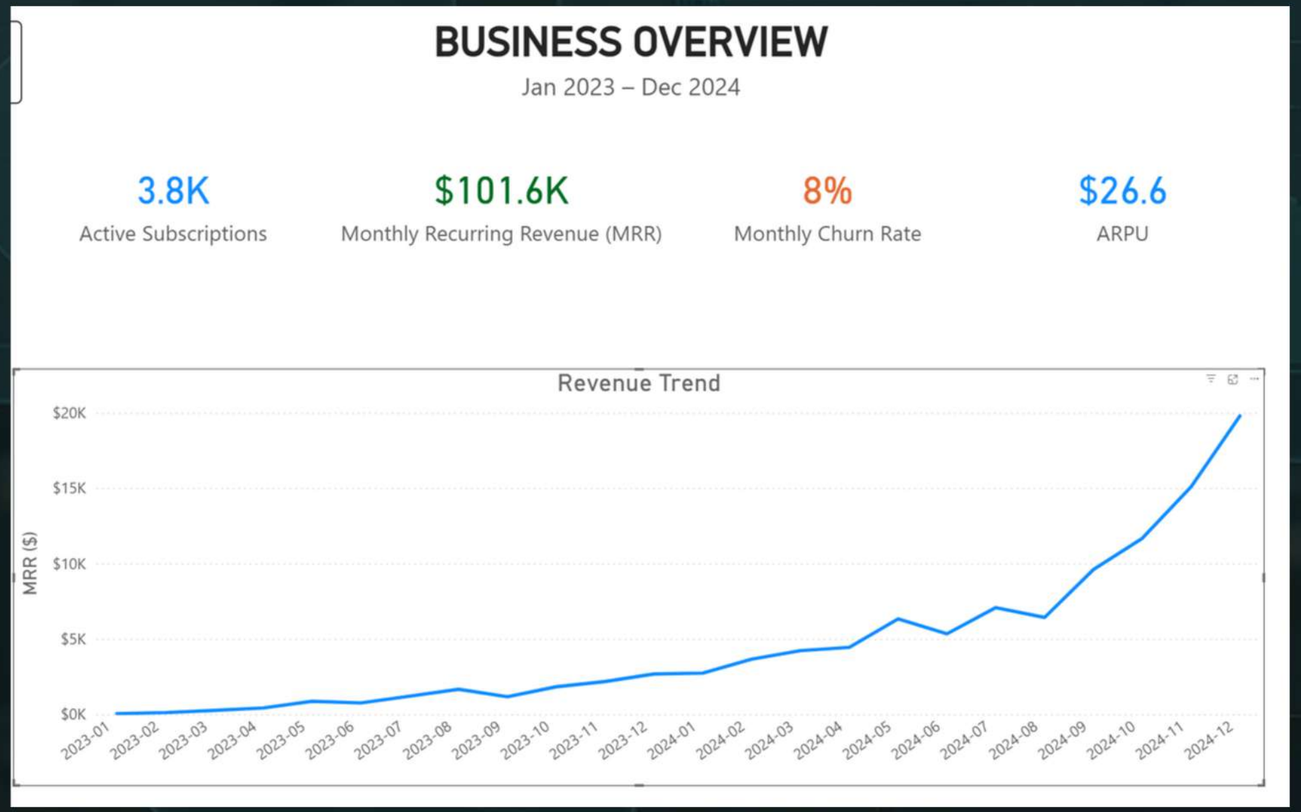
Media Subscription Analytics

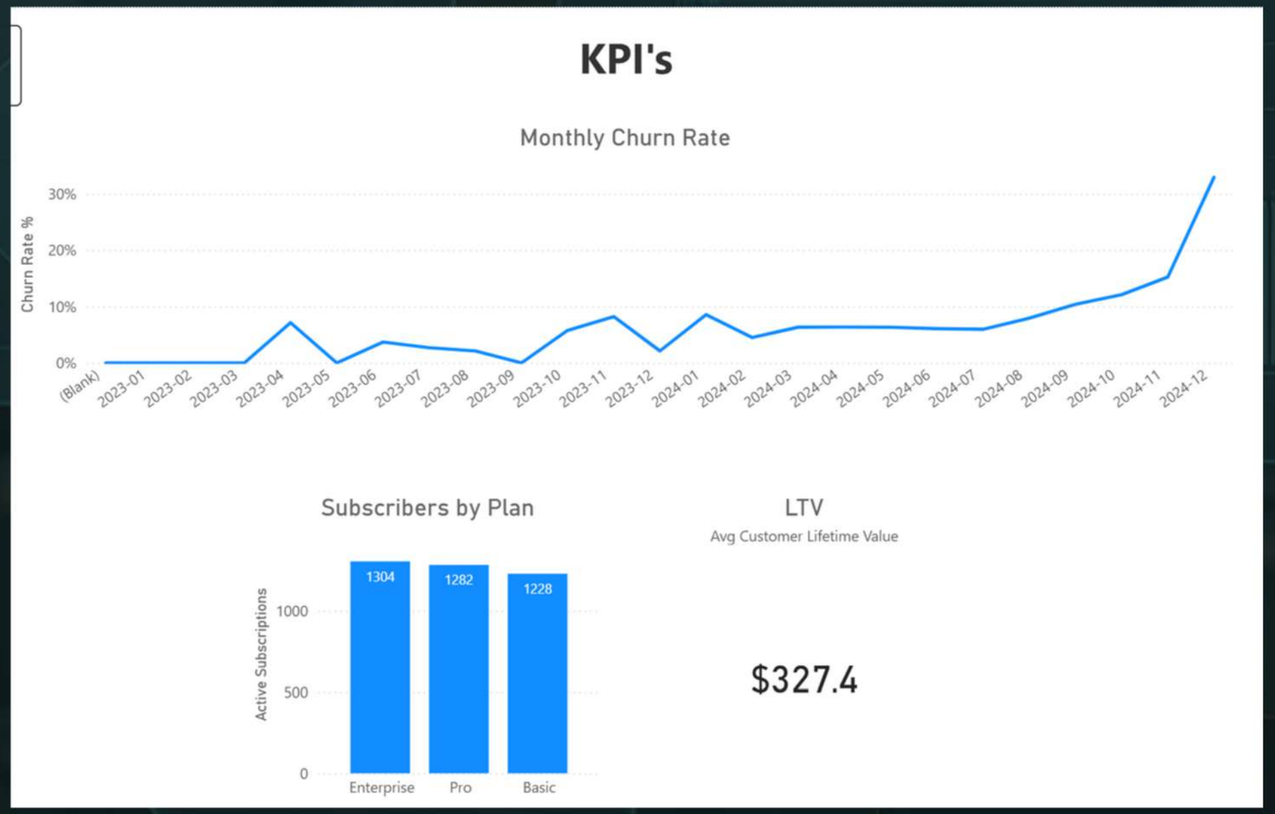


orlindataanalyst.github.io/Projects/

Key Insights

- MRR shows consistent growth from early 2023, increasing significantly in the second half of 2024
- ARPU remains stable at around $26, indicating consistent pricing and revenue per subscription
- Average churn is around 8%, which is within a typical range for subscription businesses, though it requires monitoring
- Despite churn, overall revenue continues to grow, suggesting that customer acquisition is currently outpacing churn

Media Subscription Analytics



orlindataanalyst.github.io/Projects/

Key Insights

- Churn remains stable most of the time ~8%, with spikes up to 33%, indicating a potential retention issue or seasonal behavior
- Plans are relatively evenly distributed, suggesting no heavy dependency on a single pricing tier
- Despite increasing churn (end of 2024), revenue continues to grow, suggesting that new subscriptions are outpacing customer losses
- Customers stay subscribed for a meaningful period, indicating moderate retention and monetization efficiency

Thank You!
